EDUCATION

Bachelor of Science in Information Technology

GPA: 3.73

Minor in Mathematics, **Concentration in Data Analytics**

Kennesaw State University - Marietta, GA

Expected Dec 2026

Skills: Python (pandas, NumPy, scikit-learn), SQL, Excel, PowerPivot, DAX, Smartsheet

Relevant Courses: Database Systems, Intro to Data Analytics & Tech, Applied Data Driven Solutions

WORK EXPERIENCE

Technical Co-op, McKenney's Inc. – Atlanta, GA

Jan 2026-May 2026

- Supported 200+ users across Windows environments, peripherals, and enterprise applications, troubleshooting issues and documenting solutions.
- Shadowed cross-functional technology teams (ERP, Data Analytics, Business Analytics) to gain exposure to enterprise tech operations and data workflows.
- Supported data analytics projects using Excel, Smartsheet, and data modeling to develop dashboards and automate reporting for operational insights.

CNC Operator, Panel Saw Technician, Goodwin AM – Marietta GA

May 2025-Dec 2025

- Operated a CNC machine and Panel Saw for millwork production – loaded, edited, and verified 20+ programs daily for precise part cutting.
- Programmed CNC operations using Maestro CAD software, troubleshooted code errors and validated outputs for accuracy and efficiency.
- Optimized production efficiency by analyzing program outputs and reduced material waste by ~15%.

PROJECTS

Real-Time Workforce Visibility Dashboard – Data Visualization

Apr 2026-May 2026

- Built a real-time Smartsheet workforce dashboard used across the Technology department, delivering hourly automated updates on employee availability, location, and status.
- Re-engineered 2 primary data sources and forms to capture time-based operational data, enabling accurate real-time tracking and reporting.
- Developed a scalable dashboard framework supporting convenient employee onboarding/removal and long-term maintainability.

Home Team Win Probability Model – Data Analytics

Aug 2025-Dec 2025

- Led a 5-person team in building a machine learning model that predicted NBA game outcomes from 1,000+ rows of historical data.
- Expanded baseline models by implementing contextual factors (team travel, rest days) in addition to statistical metrics (FG%, Turnovers) to improve predictive accuracy.
- Coordinated timelines and delegated tasks while applying Python for data cleansing, feature engineering, and model evaluation.

LICENSES & CERTIFICATIONS

Certified Entry-Level Python Programmer, PCEP

Nov 2023

Using Tableau to Discover Powerful Business Insights, Tableau

Nov 2023
